

Cisco AnyConnect VPN

Installation Instructions for Safari Browsers

These instructions will guide users through the downloading and installation of Cisco AnyConnect VPN software using a Safari browser on a Macintosh computer.

A RSA SecureID card and installation of Java by Sun Microsystems (<http://www.java.com>) is required before proceeding.

1. Launch your browser and go to
https://sodium.house.gov
(Enter the above URL exactly as shown)
2. Enter your **username** and **password**
(PIN + SecureID password)

Login

Please enter your username and password.

GROUP: HouseVPN ▾

USERNAME: *username*

PASSWORD: *******

Login

3. Click on **Continue**.

This system is intended for official U.S. House of Representatives business use by authorized users only and enacted in accordance with Committee on House Administration regulations.

Cancel Continue

4. Click on the **AnyConnect** link at the top-left of the web page.

5. Click on the **Start AnyConnect** link in the middle of the web page.

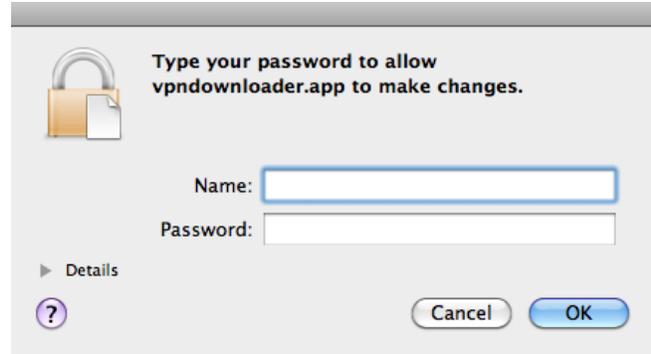

6. Java Virtual Machine Detection will start. No user intervention is required.

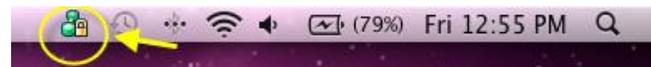

7. If prompted, check the box 'Allow all applets from "aluminum.house.gov" access' and click **Allow**.

8. Enter your **local computer admin name and password**.

9. You will see the image at the right when **AnyConnect** has been successfully installed and connected.

If the software failed to download properly you will be given a link to download it and install it manually.

10. Upon successful installation Cisco AnyConnect client will **automatically connect the initial session** to the network using the credentials supplied to download it.
